Dear Doctor

Yours of Jan 7. was only received to day
I reply at once. It is as you say. The Primus on the
mountain top becomes rough when smaller than that
below - Twice the magnification
and I shall keep no Stats. instead of merely assigning
the change to age. My head has not been troubling me so
much of late. I dont know what the cause is — but have
had it since I was a boy. & it has been the cause of my
leaving civilization & going west so much. In the Manuscript
for Gov Wheeler's Book, let Watson write his
Report in the guide. Only dont describe anything he
has described or that is in Gray Manual. Describe
everything else briefly. Except the California things
which I simply put apart for an appendix
at the end of the other part of the work. And will
only catalogue them. Please put the collec
tion total Number in parenthesis at end of description

0 1 2 3 4 5 6 7 8 9 10
cm
copyright reserved

Dear Doctor

Some time ago I wrote
you asking that you let me have the
MS of the botanical volume at an
early date since which time I have
heard nothing. Pardon my writing
again on the same subject — as I think
you will when I tell you it is a matter
of the utmost personal importance to me.
Whelen has promised to pay me a small
sum if I have all my MS in his hand
by Sept. 1st. Owing to railroad stocks etc
my income for the year only I get something
from Whelen will be only $700. Under
how I am hoped.

Dear Doctor

The way is this. I recognize the ~~Colorado~~ collections all except those from California as represent-ing a continuous area. And hence describe everything except such as watson in Bot. C. and Kings survey and Gray in manual describe. This makes the bulk of the volume. I describe it when if it is described in Botany of California. for many Army surgeons in Arizona &c will use it who have no access to Fl. Cal.

2nd I describe nothing in my 1878 California Coll. for this the Fl. Cal. does. I make a separate list (simply a list) giving place of collection altitude and page in Fl. Cal. if it be in the volume not out. This is to be an appendix to main report. Merely a list of what I obtained in California

I cant say how about C. viridiflorus from Nevada as I saw nothing of that coll. but have had to describe in haste. and from material in my own herbarium from other sources. Enclosed I send for specimen of 933. Mosquito pap. It appears to accompany well with 760 Hall & Harbour from same region. Keep the specimen. I have another. I will try & get the fruit of

2. Lutenplyllia - but am not sanguine. Watson & wife & and found the acorn falling upon full development.

Yours. Ever

J. T. Allmock

My Dear Doctor

So after all here I am yet. in the same old room. and poking away in my usual style. at my plants. The Woodruff Expedition did not get off on time. and now for good reasons dont start until May. Hence I shall be able to see the Vienna through. & nearly through the press. And please then send the MSS, as before to the care of Addison Gray Esq. West Chester Chester Co Penna. This winter I will spend largely in getting my herbarium in better shape. The fact of the matter is. I had rather not go with the Expedition. but. they pay me a good salary. and the University here gives me leave of absence and encourages my giving to collect for them: and it appears the only available way of making a living for the next two years. So that I accepted the place somewhat against my own desire.

Can I do anything for you. Yours Ever D. G. Rattray

My dear Dr. Engelmann

I happy new year to you and
many more of them with comfort in all.

I forward you to day the remaining
proof. Please give it your earliest attention
and return as usual to Lt. E. M. Wheeler U.S. Engr.
Lock Box 93 Washington. D.C. I have
the rest of your mina contribution in
2nd revise but as the alterations you indicate
are all attended to it is hardly worth
while to bother you with them. My reason
for keeping Encelia agta conjuncta is I find
it so in Hooker Synopsis of vols at end of
the English Edition of Le Maout & Decaisne. which
is understood to predate the rest of the
Flora Planetarum. And I have endeavored to
conform to it throughout so far as I could.
Fearing that they have not done as I requested
about sending you the paper on the Conjunctae
from Washington I take the liberty of sending you

along with this your M.S. Long ago asked urgently
if he should send you copies of all my contributions
to botanic progress since 1st. If he has not done
so I will shoulder the responsibility of letting this MS
go. But if he has, please return it to me. As he sends
with an absurdity of red tape insist on holding me
responsible for return to him of all the original MS.
even though I had taken the trouble to copy all
to guard against accident.

With a renewed expression of profound
obligation to you My dear Dr. I am as ever

Yours truly

My Dear Doctr

I fear you will be for
sending a policeman on to "buck and
gag" me for my impertinities. but-
I am getting it from all along the
line. Ulrich has been at me weekly for the
rest of the MSS and this morning an
good friend Prof Eaton's letter is forwarded me
from Washington In which he states he
too is at a dead lock because his fern
paper is not out. And Ulrich cant begin
on it until all the Manuscript is in.
Besides Reading the proof and making the
index will run almost inevitably over
on me at a time when I shall be lecturing
six times a week. and having beside two
classes in analytical botany. Then if in my

network and want of time I am unable to
do this as it should be My botanical friends
in town owe me $100 at once day
- more slipshod work. and the rest of it: If
I delegate the work to another I must then give
up $200. and be content - to support my family
and myself on $1200 a year instead of $1400.
Please forgive my importunity. of which I
would not be guilty if absolutely bread & butter
did not drive me to it.

Sincerely Yours

Ans — Saturday

Phila. Box 2038, Jan. 21, 1878.

My dear Doctor,

By the way, before I forget I want to say that if you place any dependence on double stained cross sections of pine leaves for the compound microscope and are not in the way of making them yourself, I will after awhile be glad to do so for you. I am devoting all the very little spare time I have now to that line of work for class room lectures. I have not yet laid my hand on the Coniferae but know perfectly well that I can succeed with it. Now to go back. You say in yours received this morning. "I adhere to your last order to describe all that are not in Gray's Manual — is it so?" Now in yours of Oct 9, the last in which we had any discussion as to plan; You say: "Here come more orders again. Heretofore you have said Gray's Manual, Watson's Botany, Fl. Cal., everything else to be described. Now you exclude Fl. Cal." Well I should not my dear Doctor have alluded to this except to give you a better idea of my consistency. The plan is this — The plants of

1871 & '72, ~~described~~ enumerated by Mr. Watson in Wheeler's pamphlet of 1874, from page 6 to page 19 inclusive and the plants of 1873, enumerated by me in the same paper, page 31 to 57 inclusive and the collection of 1874, as yet mostly unpublished, are to be arranged according to their orders in one report and all of them described except such as are described in Watson's Botany of the 40th parallel and in Gray's Manual. The plants of 1875 collected by me in California are not to be described as this will be done in Gray and Watson's Flora of Cal. I keep them separate and simply enumerate them and will make an appendix of them for the back part of the volume. The plants of 1871 & 72, I have never seen; they are in Cambridge. Trusting to the accuracy of Mr. Watson's determinations I have described the species from other specimens. Erythraea triacantha is evidently a misprint. The other two are of course good species. When known always give the number and place of collection and usually name the collector.

Yours ever,

J. T. Rothrock

Phila. Dec 28. Jan 29. 1894

Dear Dr. Engelmann

Mss. received and I like it much. Many thanks. Your are right. All the plants of 1897 S. are from California and are to be simply enumerated, not described and are to be bound as a separate paper as an appendix in the back of the volume. (in the collection) Of course when I have the same sheets, coming from some other place as well as from California. If it is to be described in the body of the book (in which case it is easily named) described in Gray manual or Watsons Bot. W. U.S. and is also to be enumerated in the Cal. list. I have not now on hand any pine bay section. but will make some as early as possible. i.e. when the proof sheets allow me.

West Chester Chester Co Penna.
Nov. 13th, 1875

My dear Dr. Englmann

Your letter this morning is a pleasing assurance that you are not grieved and about again. I have requested that the Cactaceae be sent you.

As to want of uniformity. It is of course better that in essential details a work should be uniform, but I think we go so far in details. In my introduction I state that the general model being given each author will appear as nearly as may be in his own style. I found that the editor is expected to put MSS. in shape, but I did not want to take any responsibility of the kind lest I should fail to give the exact idea and so lay myself open to a severe charge. In fact some of them who criticise would "go for me" if I did. The signs '+' " I know are objectionable but I was ordered to follow the model of WCV Kings Rep & hence had no choice.

As for locality I simply put in that

Ustus glaciales, Mull. — Utah.

Do you want a good. Stained
sections of Pinus edulis &c. &
of cuticle — I have my first Jepson Cal.
Specimen?

I have in P.O. Littlerock
I will ask you not to publish about the
Diatoms, as I am at work on a paper in
that direction.

As a rule I quote authorities sparingly
when they appear to be some object in
doing it

Rec Dec 14

West-Chester Chester Co Penna Dec. 10th 1878

My Dear Dr. Engelmann

You can trust my copy of your mss for figures. I am sure. Dont you remember that the first-proof sent you from here you complained that nothing was sent you save that in which the printer corrections were to be found? Well, now that red-tape copy that you returned was the clean copy sent at my request in order that you might have the whole margin to make notes in. If you did not use it of course I dont know why the printer wanted it back but so he did. I will hurry along that extra copy of the engravings for you. For of course I can understand that you would want to compare it with your present work.

Now let me rise to a point of order — I did not do justice to the Ephedra". You say. Well. Well. No man knows that better than I do; but then my dear doctor. has it not been the burden of my song for three years that I had positive orders not to describe anything described in Vol. I Kings Survey or in Gray Manual? Now I utter my protest against being in anyway held responsible for such sins of omission. I know there are many cases in which I should have said more, but I was positively bound not to.

Now all I ask is fairness and that- She
without any mental reservation exonerated
from blame in this matter. Am I not
right? I have in no case insisted on others
following me in the matter for I wanted them to have
the best that possible. but I was under orders. I have
you see so many sins of my own to answer for
that- I cant possibly carry those which dont
belong to me.— Still we are nearing the
end and I am glad of it- for the work has been
done by me when I was sick. And under a load
of care and anxiety that- ground all the life out of
me. Once I get to B in the index I shall break
out into Luthers long meter doxology. and then think
about some botanical work I can take up and do in
a more thorough manner as I want to do it- I will
send you the rest as it- comes.

Yours Sincerely

My Dear Dr Englmann

I send you by to day
mail 6. of my double stained
vegetable preparations. I find
the staining process of great use
especially in teaching. I dont suppose
you will see much in them you
have not seen in the unstained. More
particularly that the stomata in the
pinus Monophyllus are more clear. Please
look at them with a power of say
100 diameters.

Yours Truly
J. T. Rothrock

I am looking after Johns
Hopkins University. Can you give
me a lift in any way there?

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

West Chester Penna. Nov. 19th 1879

My dear Dr.

Your letter was received yesterday & I am glad to find there Hides of interest. Thinking he might like a Sciadopitys, stained and Mounted I have prepared for me for permanent specimen. There are 4 sections on it. The two in the middle have been bleached in Labarraques Solution. Hence the Starch & Chlorophyll [illegible] are all gone. Hen are stained in Logwood. & as just will observe the central bundles are as plainly differentiated as in the Pinus & dent you. The two sections at the end of the row are not bleached, except by soaking in Alcohol. & mued not-withstanding if you found some Starch grains from the potato in which I had the leg to section it; still adhering. In them Hen is the same differentiation only the colors are two, Carmine and Iodine green. I will write a detailed account of my method of staining this for Botanical Gazette for September. I will [illegible] keep back a part of it that I may be able to have the specimens kept for 6 or 8 Months in a German laboratory. I hope just a little prospect from Johns Hopkins, but not

Say what will come of it. Thanks for your name & will use it if called upon.

What surprises me about the Sciadopitys is the entire absence of stomata save in the yellow sulcus on the lower side of the leaf. Here too it requires a fair power and good manipulation to show them well. In D monophyllum, & D remanens correctly they are in line all around the leaf. Sciad. is very instructive. I have now got a bright pupil working [illegible] sections & finishing them of all the authentically determined pines in my herbarium agnds. Also preparing cuticle in same way; to make a thesis of it for incoming examination. He is much pleased for I have no doubt you can after spring get the use of his slides if you desire, or may be get a duplicate set of them.

Later. Nov. 23rd Concerning bits. The specimen named Vulpina was from Florida. Hence the vulpina of Linnaeus. Now in it the bark does not shell off and the small liber bundles first developed remain at the tip of the cone [illegible] then come the latter ones in plates. The thickened sides of the cone [illegible] made up of either wood or liber (I dont think they can always be distinguished) bind the plates together. Hence the bark holds on and gives always the small apex of the cone. Now in the other specimen the truncated plates are due to the removal of the outer bark having carried away the small apex. I think on that same specimen you will find some of the bark either removed entirely or partly but in either case showing the enclosed plates.

Yours Ever

J. F. Patrick

I have succeeded in putting B Colon in what I take to be a section of Vitis Labrusca. I send also a single stained specimen of Cuscuta, prepared by another process, it is of no great value save as a curiosity,

Letter on Griffith Letterhead

West Chester Chester Co Penna.
Apr. 19. 1880

My dear Dr. Englemann

I hav to ask as a personal favor that if you can spare me, you will send a copy of you paper on Pines to Mr. Crozer Griffith. 2038 Chesnut St. Philadelphia Penna. He is a bright young student of mine who for some months has been studying the pine leaves microscopically with great care: making stained sections of them. If there be any cost let me know & I'll remit. but I am very anxious that he should have a copy.

Yours Ever D. C. Gilbert

Dear Dr Engelmann.

The paper on Ferns which you were kind enough to send me I received yesterday. I had just been thinking & writing to ask to you for it.

I suppose I am indebted to the University of Berlin. permanently, but my time will be & necessity to Medical Botany. In fact I have been driven to begin preparations & to look out for my students in the Course preparatory to Medicine. I suppose all these changes which have come in my field of work mean that I am to do no original work but simply be a teacher. I have come to accept the situation with a not unforced complacency.

With many thanks for your very important paper I am Sincerely Yours

C. F. Millspaugh

Dear Dr Engelmann

I received your kind note a few days ago. Touching the matter of Second growth Oak being stronger: the fact is now so generally allowed that Wheels made of it command higher prices than those made of first. I have verified my conjecture published in that paper relative to the strength of the Medullary rays. Thus live Oak pulls a-part in the direction of the ray at about 1100 lbs to the Square inch. but in Father at right angles to it at about half that weight. These facts will soon be more fully brought out by a pupil of mine. & as he has not yet published I had rather nothing was said about it yet. Touching the Vitis. I will be very glad to prepare Specimens for you if you name and send me the material. The dry sticks do not stain so well as the green but I think

I can bring them out - ~~I think~~. Please send them very soon as in a little while I shall be away for several months. If you prefer I will give the sections a study and report results to you. Though your judgment on them I think is worth more than mine.

Concerning length of fibre. I have not been able to make clear out yet that it has any certain relation to strength, except in such extreme cases as Phoradendron where owing to the very short fibre the twigs snap almost like glass. I am mad sure that we must admit differences in the quality of the cellulose per se, as affecting strength of timber. Hapes is busy with a big contract of Landscape Gardening. I want to study the microscopic character of wood and will do so; very much more - but when? I am so overworked by my University duties. Teaching 30 hours a week, & riding six miles a day (to & from my home) does not encourage original investigation.

Yours faithfully
J. T. Rothrock

My Dear Dr Engelmann,

I am much gratified to hear of your safe return to this Country. I have been unable to use my eyes until very recently & hence have been unable to prepare your specimens. I shall finish the lot in a few days. Hearing of you at Boston I did not know where to send them - pray let me know - My eyes are I fear about used up.

Yrs Truly

J. T. Rothrock
